

TAMERASK
Cranston, RI

O. Ahlborg & Sons, Builder
Single hung window with specialty shapes

ROBIN TUFTS

JSA, Inc

Vision: The architect, JSA, Inc., needed a specific window trim detail for an assisted living facility in Cranston, RI, that did not yet exist in Paradigm's product offering. On top of that, the building design was so unique that it called for several different casing applications.

Challenge: Paradigm worked with the architect to design a new 5" brick mold casing to reflect the desired look required for the Tamerask project. The casings needed to be attractive and versatile.

Solution: Paradigm went to the drawing board with its' team of engineers and solved the application and design challenges. Because the units were going into steel frames with fiber cement siding on the exterior, Paradigm engineers came up with a 5" pre-applied brick mold casing system that included a sill nose detail. Flexibility was also required, so the team built the units with casings on 4 sides, 3 sides and in some applications, a pre-applied J Trim with no exterior casing.

Payoff: At Paradigm, we bring years of proven experience to the Architect and Builder, that enable us to define practical solutions for virtually all your design/build needs. The Thermal and Structural performance of our window line allows for diverse and imaginative building applications. Whether you are looking for innovative and aesthetically appealing casing details, or proven performance ratings, we strive to meet your vision for each individual project. At Paradigm we are sensitive to the unique application of your project, understand how to work within budget parameters, and meet the project schedule. All our window projects are backed with an industry leading warranty, that ensures your peace of mind for years to come.
